

Dynamic Units

On some *I-DEAS TMG* forms, you can choose from a list of alternative units for data values to be entered. Use the pulldown menu to pick the units you wish to use; the software automatically converts any value previously entered.

Units selected in this way are no longer linked in any way to units selected on the *Options* menu at the top of the icon panel.

To return the field to the default mode, use the dynamic units menu to pick the unit symbol enclosed by brackets at the top of the list. Future selections on the *Options* menu will then be reflected by the units for this field.
