

Using the TMG Executive Menu

Many TMG operations can be performed without starting I-DEAS at all, instead using the TMG Executive Menu. This tool provides access to a number of commands and options which are not available when working in I-DEAS. For an expert user, running TMG with the executive menu can reduce the time required to solve a model.

Installation

The TMG Executive menu can be installed by downloading the latest patch from the MAYA ftp site <ftp://ftp.mayahtt.com/downloads/patches/>

Starting the TMG Executive Menu

Start the TMG Executive menu as follows:

- On Windows, find the Executive Menu icon on the Start menu, under Maya Tools
- On UNIX, type the following command at the prompt:

```
[path-to-ideas-installation]/tmg/com/tmg.com
```

In the command prompt window, type UI to start the new interface.

Online Help for the TMG Executive Menu

The commands of the TMG Executive Menu are fully documented within the application itself. Just select the Help button at top of the main window. A web browser will open displaying the explanation of the commands.
