

## Obsolete Solar and Orbital Heating

The I-DEAS 8 release of I-DEAS TMG provided a completely new and greatly improved set of tools for modeling solar and orbital heating. If you are creating a new model, see *Modeling Diurnal Heating* and *Simulating the Thermal Effects of an Orbit* for complete instructions.

However, if you only want to maintain or modify a model created with a release of TMG *prior to I-DEAS 8* you can use the older set of tools documented in this section.
