### Mission Report (Michael Studinger, Mission Scientist)

The original plan for the transit from Kangerlussuaq to Thule was to fly along ICESat track 412 to Summit and then along the ice divide between NGRIP and NEEM. We had to stay at low elevation because of a sick crew member and surveyed sea ice targets in Disko and Baffin Bays instead.

The weather in the area was very good as expected.

#### Individual instrument reports from experimenters on board the aircraft:

**ATM:** worked very well.

**MCoRDS:** was not operated on today's flight because of sea ice mission.

**Snow and Ku-band radar:** The snow and Ku-band radars worked well.

**Accumulation radar:** worked well.

**Gravimeter:** Worked well. No issues.

**Magnetometer:** worked well.

**DMS:** worked very well.
